

ABSTRACT

5 Floorboards (1, 1') are shown, which are provided
with a mechanical locking system consisting of a sepa-
rately machined locking strip (6) which is mechanically
joined with the floorboard (1), the locking strip (6)
being designed for mechanical fixing to the floorboard
(1) by means of a joint, which is operable by snapping-
10 in and/or inward angling, and the locking strip (6) being
designed to connect the floorboard (1) with the essen-
tially identical floorboard (1') by at least inward
angling.

Moreover, a locking strip, a strip blank, a set of
15 parts for making a floorboard and methods for manufac-
turing a floorboard and a locking strip, respectively,
are shown.
